SUMMARY

- Data Scientist with 2+ years of experience in Machine Learning, AI, Data Analytics, Data Modeling, Statistical Modeling, A/B Testing, Data Mining and Data Visualization
- Proficient in Python, SQL, Tableau, TensorFlow and Spark
- Skilled at developing and deploying Machine learning models for data-driven decision-making and business outcomes
- Experience in managing AWS Cloud Resources like EC2, S3, ECR, RDS

WORK EXPERIENCE

Crypt0nest.io Remote
Machine learning Engineer Intern *Aug 2025 – Dec 2025*

- Enhanced cryptocurrency investment strategy by building a time-series forecasting pipeline using the XGBoost
- Applied rolling Z-Score normalization to scale the features, removed look-ahead bias and increased model accuracy by 18%
- Boosted predictive correlation by 15% by performing Bayesian Hyperparameter tuning to enhance the model
- Enabled 3x higher predictive throughput with 40% lower latency by deploying the model using FastAPI

Dallas AI Summit Dallas, TX
AI Engineer Intern *May 2025 - Aug 2025*

- Enhanced job search strategy by building an interactive AI Agent using LlamaIndex and CrewAI
- Integrated LlamaIndex to retrieve the relevant data from ChromaDB by improving model responses by 25%
- Recommended learning path and relevant jobs based on 1000+ user profiles by using embedding-based similarity search
- Achieved an F1-Score of 0.86 for providing the career path predictions and handled 2x increase in concurrent users
- Deployed the model using FastAPI-based microservices to get real-time career guidance

University of North Texas Denton, TX
Teaching & Research Assistant *Jan 2025 - Aug 2025*

- Conducted in-depth exploratory data analysis using Python (Pandas & Numpy) to teach students how to explore, clean, and interpret real-world datasets effectively
- Mentored and supported 100+ students through hands-on Tableau data visualization projects, emphasizing analytical thinking and best practices.
- Guided students in SQL-based data analysis, helping them write efficient queries to extract insights and prepare data for visualization.
- Trained students to design interactive Tableau dashboards using filters, parameters, and key visual components to communicate insights clearly and effectively.

SKILLS

Programming Languages: Python, C, SQL, Java, C++

Packages & Tools: Numpy, Pandas, Matplotlib, Scikit-learn, Seaborn, TensorFlow, PyTorch, Keras, Scipy, Llamaindex, CrewAI

Data Visualization: Tableau, MS Excel

Statistics & ML Techniques: Linear Regression, Logistic Regression, Clustering(K-Means), PCA, Neural Networks (Deep Learning), Decision Trees, Random Forests, XGBoost, SVM, Model Tuning, Grid Search, Hypothesis Testing, A/B Testing

Genearative AI: Agentic AI, RAG, LLM Finetuning, Ollama, OpenAI, Gemini, Transformers

Other Tools & Technologies: AWS, Spark/PySpark, Hadoop, Databricks, Git, Docker, Streamlit, FastAPI

Certifications: Machine Learning Specialization, Deep Learning Specialization (DeepLearning.ai)

PROJECTS

Customer Segmentation & Retention Analysis [Python, EDA, Scikit-learn, AWS, Docker, GitHub Actions, CI/CD]

- Developed an end-to-end Customer Segmentation & Retention system using RFM (Recency, Frequency, Monetary) and Customer Lifetime Value (CLV) modeling to identify high-value, loyal, and at-risk customers.
- Performed in-depth exploratory data analysis (EDA) on a dataset of 50k records to understand customer behavior patterns, data quality issues, and feature distributions prior to modeling.
- Built modular, configuration-driven components for data ingestion, validation, transformation, and model training using XGBoost, Random Forest, and Artificial Neural Networks (ANN), achieving up to 87% accuracy and AUC of 0.92.
- Automated ingestion of semi-structured customer data from MongoDB Atlas, converting it into clean, analysis-ready datasets with logging and exception handling reducing manual data prep time by 40%.
- Managed model evaluation, versioning, and storage on AWS S3, and deployed the containerized application using Docker with CI/CD via GitHub Actions to AWS ECR and EC2.

Fraud Detection System [Python, Pandas, Model Optimization, Scikit-learn, Deployment, Supervised learning algorithm]

- Implemented a fraud detection system by analyzing a dataset of over 6 million transaction records by performing EDA
- Applied statistical techniques to engineer the features like addressing class imbalance using weighted models
- Obtained true-positive-rate of 0.95 by training a logistic regression model using a scikit-learn pipeline
- Dockerized and deployed Streamlit app for real-time fraud prediction detecting ∼500 fraudulent transactions

Legal AI Chatbot [RAG, Ollama, OpenAI APIs, LLM Optimization, Deployment]

- Built a Legal Chatbot to support individuals with disabilities to deliver legal guidance across health, education and job
- Created a ChromaDB vector store from 500+ files via semantic chunking and retrieved data using on-device Llama 3.2
- Achieved a precision of 0.86 and reduced hallucinations by 60% via Fine-Tuning and Prompt Engineering
- Integrated Streamlit UI, implemented CI/CD and scaled the system for 100 queries/sec by deploying it on AWS

EDUCATION

University of North Texas — Denton, TX

Master of Science in Data Science [CGPA: 4.0/4.0] — *Jan 2024 - Dec 2025*

Awards: HackUNT Winner for designing a fraud detection ML model

Coursework: Machine Learning, Statistics for Data Science, Database Design, Artificial Intelligence, Big Data Analytics and Management, Algorithms and Data Structures

Bhoj Reddy Engineering College for Women — India

Bachelor of Technology in Computer Science and Engineering — *Jul 2019 - Aug 2023*
